

Future of News: Will Robot Readers Take Over? from VOA

Ask questions to obtain the answers underlined in the following sentences taken from the text:

e.g.

David likes bacon. What does David like ? (**Bacon**)

David likes bacon. Who likes bacon? (**David**)

- 1) Many people now get a lot of their news on electronic devices, instead of traditional media, such as newspapers, television or radio.
- 2) Recently, China's state-supported news agency Xinhua ...
- 3) ...Xinhua launched what it called the world's first artificial intelligence, or AI news presenters.
- 4) The system then created the AI robotic presenters, which look and sound like real people.
- 5) A deepfake is a video that looks real, but was electronically changed.
- 6) Such videos can make people appear to say things they never said or do things that never actually happened.
- 7) Xinhua claimed the AI newsmen were able to read the news "as naturally as" a human presenter.
- 8) Britain's BBC recently released a video that used machine learning to make it look like one of its news readers was speaking different languages.
- 9) The London-based company that developed the system says
- 10) ...its goal is to "remove the language barrier" for many different kinds of video across the internet.
